**18-400mm F/3.5-6.3 Di II VC HLD (Model B028)**

For Canon and Nikon mounts  
Di II: For APS-C format DSLR cameras

## Go to extremes with the world's first\*<sup>1</sup> 22.2x ultra-telephoto all-in-one zoom.

Introducing the world's first ultra-telephoto all-in-one zoom lens for the APS-C format. With a focal length range of 18-400mm and 22.2x zoom, it has an ultra-telephoto range equivalent to 620mm in the 35mm format. This brings distant subjects closer, while providing perspective-flattening effects that are only possible with an extreme telephoto lens. Plus it offers exceptional optical performance across the entire zoom range—from wide angle to ultra-telephoto. With this new lens—and its Moisture-Resistant Construction—Tamron brings the art of photography to the joy of travel. Now you can use the same lens to shoot everything from stunning landscapes and neon-lit cities to detailed portraits and delicate flora. The ultra-telephoto range makes it just as easy to photograph animals and sports. And with a maximum magnification ratio of 1:2.9, you can even enjoy tele-macro photography.

## 620mm capability, compact size

Until now, shooting at ultra-telephoto ranges meant carrying large interchangeable lenses. Thanks to the all-in-one zoom technology developed by Tamron, you can travel with a single lens that's 121.4mm long and weighs only 705g.\*<sup>2</sup> Experience the thrill of shooting with compact equipment that makes it easy to capture ultra-telephoto images.

\*<sup>2</sup> Length and weight are based on the Nikon-mount lens.

## Highly precise. Conveniently compact.

Tamron's exclusive HLD (High/Low torque-modulated Drive) saves power while providing superior drive. It focuses accurately and quietly while adjusting the motor's rotation from low to high speeds, enabling smooth autofocus. HLD let us design a space-saving AF module, for a sleeker barrel and reduced overall lens size.

## Sharp, solid telephoto shots

Tamron's VC (Vibration Compensation) technology stabilizes the image in the viewfinder, so you can frame your subject and shoot a sharp image—even at ultra-telephoto ranges and in poorly lit conditions.
